REASONS FOR ALLOWANCE

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on December 14, 2001 has been entered.

Reasons For Allowance

2. The following is an examiner's statement of reasons for allowance: none has disclosed an autostereoscopic image display device comprises an area shifting and division control means for dividing a *shading means* into areas in a horizontal direction and *independently* controlling shifting of the liquid crystal shutters of the shading means in each of the areas, each area including a plurality of continuous shading parts, wherein a viewer can view stereoscopic image when the *head position* of the viewer is *out of an optimum position from the display means*.

Prior art reference, US patent issued to Isono et al (PN. 5,315,377) teaches a three dimensional image display having a barrier display liquid crystal panel that is capable of generating different numbers of pitch or variable pitch barrier to accommodate different viewing points however it does not teach means to divide the barrier panel into areas and independently controls the barrier generation in the areas to allow the viewer observes stereoscopic image when the head position is out of the **optimum position** from the display panel, in particularly out of the optimum distance from the display panel.

Prior art references JP 10-221646, JP-3-38633, and WO 00/42466 each teaches a stereoscopic image display device with interlaced left and right eye image strips displayed on the display means however **none** of the cited reference discloses *an area shifting and division control means* for dividing the **shading means** into **areas** in a horizontal direction and *independently* controlling shifting of said liquid crystal shutters in each of the areas, each area including *a plurality of (or at least one) continuous shading parts, wherein the viewer can view a stereoscopic image when the head position of the viewer is out of an optimum position from the image display means.* The WO 00/42466 reference teaches about dividing the display means into areas however it does not teach to divide the *shading means* or the optical grids into areas and independently control the liquid crystal shutters in each area.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

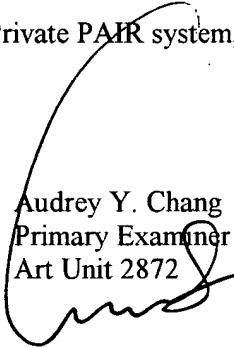

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Audrey Y. Chang whose telephone number is 571-272-2309. The examiner can normally be reached on Monday-Friday (8:00-4:30), alternative Mondays off.
